Statement of compliance with Direct Food Contact.

Lockwood Products, Inc offers the following information from the FDA regarding compliance with FDA guidelines as well as EU 1935/2004 guidelines.

Standard Loc-Line products are made of an Acetal copolymer. This material is used in accordance with the rules set forth in 21CFR 177.2470 and EU 1935/2004 meets the requirements of these regulations for direct food contact.

All colorants used in the manufacturing of Standard Loc-Line products comply with guidelines 21CFR 178.3297 and EU 1935/2004.

NOTE:

- Chlorine or chlorinated cleaners should never be used on Loc-Line as this will cause cracking of the parts.
- These regulations limit the use of Loc-Line to temperature not to exceed 250F.
- Loc-Line is not approved for use with alcoholic or fatty foods at any temperature.
- Standard Loc-Line products also meet NSF International Standards 14, 51 and 61 for contact with potable water.
- Lockwood Products, Inc does not warranty its products for any specific application.
- Testing by the end user is always recommend to ensure satisfactory performance of the products in any specific application.
